

EZZY WAVE SE 2008

Have you ever wondered why Ezzy Sails has such a loyal following of **hardcore windsurfers**? Try an Ezzy and the answer becomes obvious. For 2008, the **Ezzy Wave SE** will take you down the road to sailing nirvana.

The first thing you will notice about the 2008 Ezzy Wave SE is the **extremely wide wind range** designed into the sail and accessed through the outhaul. In high wind, just pull more on the outhaul and the profile flattens to give a locked, **stable feeling**. If you want more power for some light wind sailing, ease the outhaul and you get a deep and **powerful** light-air sail.

Next, you will notice the sail's extremely **balanced and soft feeling** that allows you to focus on your next move rather than on what the sail is doing.

Finally, you'll notice our proven construction. The main sail panels are made of ultra-durable **Spectra X-film**, and the foot is constructed of an even stronger Ezzy-designed Spectra X-film. The clear **vinyl window** will neither tear nor scratch, giving a lifetime of great visibility and strength. Adding even more durability, the 2008 Ezzy Wave SE has a **weft-stop sleeve cloth** that will impressively resist tears caused by extreme forces like breaking masts.

The Ezzy Wave SE is equipped with a thick mast pad that **flips up for easy rigging**, triple-ply leech reinforcements, Ezzy EndoBatten construction, an adjustable and removable head strap, a removable **tack pulley that can be replaced with a D-ring** for those sailors that prefer a grommet, and printed rigging instructions on the sail.

And of course, **every sail is rigged and checked** before it leaves the factory.

Enjoy the Ezzy journey.
