

# free wave

**Ezzy Freewave:** a new **light-weight** wave sail with a **flatter profile**. Suited for all levels of windsurfers, especially freestylers and sailors who prefer a flatter shape. The Freewave's effortless rotation makes it excel in jibes and transitions.

The Freewave contains **no monofilm**. The main panels are made of our ultra strong **Spectra X-film** which provides strength and **great visibility** throughout the body of the sail. The tack panel utilizes our **higher density Spectra X-film** in the foot area to resist harness hook tears and nose-of-the-board punctures.

**Other key features include:** a removable downhaul pulley, **weft reinforced sleeve cloth**, flip-up mast pad, **RBS** battens and a **vinyl window** that won't scratch. The Freewave also features our new downhaul and outhaul **rigging indicators** that give you the correct settings for light, medium and strong wind conditions.

**Every** Freewave is **rigged** in our factory. We **tune the battens**, set the adjustable top to the **correct mast length** and go **over every inch of the sail** to make sure it is **perfect**. That means when you get to the beach you and **your Freewave** will be ready to go.
