

INFINITY

TECHNORA®

The new Infinity is built with Technora® sailcloth. Technora® is a para-aramid fiber that weight for weight is 8 times stronger than steel and 3 times stronger than nylon and Dacron. Since Technora® is so light, we are able to save considerable weight in the sail. Furthermore, the low stretch of Technora® means there is less stretch distortion along the leech when a gust hits. This produces a more stable feeling sail.

The Infinity's deep, draft-forward profile provides superb low-end power and when flattened with outhaul, the Infinity handles overpowered sailing like a dream. The Infinity's narrow sleeve won't fill up with water which makes water starting and uphauling easy. The camber inducer system will fit any SDM or RDM mast made within the last 15 years.

How does the new infinity compare to our previous Infinity?

- 1) Much lighter and easier to handle in jibes and tacks.
- 2) More stable in straight line sailing.
- 3) Increased wind range.

Other key features:

- Contains no monofilm.
- Body panels made with Spectra X Ply.
- RBS epoxy battens.
- Vinyl window.
- Removable triple block tack pulley with D-ring option.
- Color coded outhaul and downhaul rigging indicators.
- Every sail is rigged and checked in our factory.

size	min Luff	max Luff	min Boom	max Boom	Mast	No. of Battens	No. of Cams
